Detailed Action

1. This action is in response to application filed on 02/13/2002. Claims 1 – 8 were received for consideration. No preliminary amendments for the claims were filled.

Election/Restrictions

2. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1 – 4, drawn to an encryption/decryption system comprising a random number generation unit and modulo operation computing classified in **class 380, subclass 277 i.e., key management:** subject matter providing supervision or control of a signal necessary for encryption or decryption.
 - II. Claims 5 – 8, drawn to encryption and decryption within a database management system for retrieving digital objects from a database are encrypted and decrypted classified in **class 713, subclass 193 i.e. data processing protection using cryptography:** subject matter wherein unauthorized access to information held in database is prevented.
3. Inventions I, and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility such as an encrypted system using a random number generation unit, classified in a *different*

Class/Subclass. Invention II has separate utility such as an apparatus and system for encrypting data using the symmetric key cryptosystem with a database management system, classified in a *different Class/Subclass*. See MPEP 806.05(d).

1. The inventions are distinct, each from the other, because of the following reasons:

(a) These inventions have acquired a separate status in the art as shown by their different classifications.

(b) The search required for each Group is different and not co-extensive for examination purposes.

For example, the searches for the two inventions would not be co-extensive because these Groups would require different searches on PTO's classification class and subclass as following:

The Group I search (claims 1 – 4) would require use of search **class 380**, **subclass 277** (not require for the inventions II).

The Group II search (claims 5 – 8) would require use of search **class 713**, **subclass 193** (not require for the inventions II).

For the reasons given above restriction for examination purposes as indicated is proper.

2. Application is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48 (b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48 (b) and by the fee required under 37 CFR 1.17 (h).
